India Circular Economy Forum (ICEF2026)

Harmonizing Value Chains: The New India-EU Trade Era

A precursor Roadshow to WCEF2026

BROCHURE

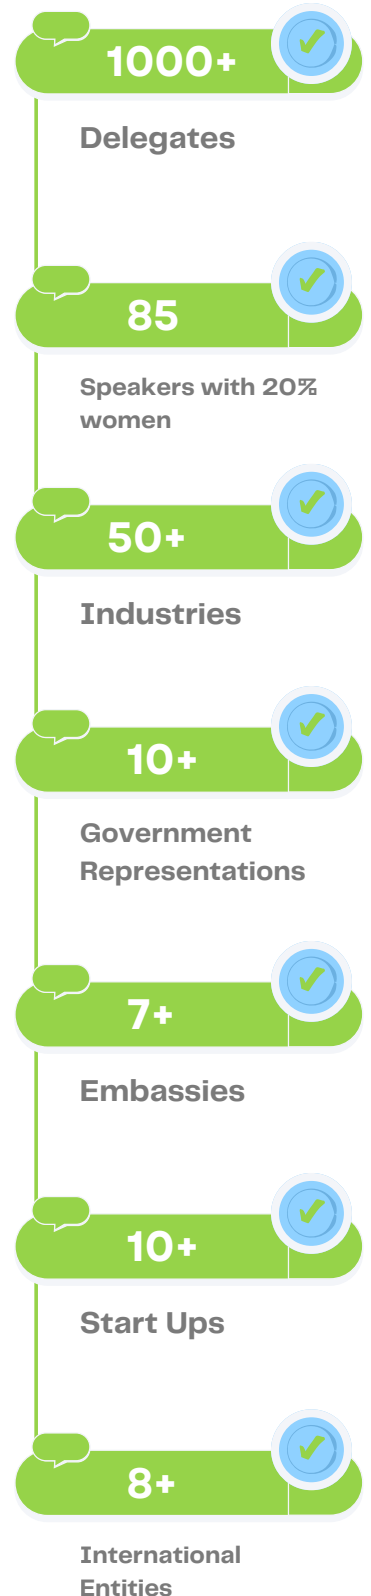

**20-21 AUGUST, 2026
New Delhi**

The annual India Circular Economy Forum (ICEF) serves as a platform where India's leading circular economy solutions are presented, offering a unique opportunity for business leaders, policymakers, and experts from around the world to converge. It highlights the potential of circular economy approaches for businesses to discover new opportunities and gain a competitive edge, contributing significantly to the achievement of the United Nations SDGs.

Commencing in 2022, the first three editions in 2022, 2023, 2024 and 2025 successfully convened an illustrious ensemble of thought leaders from industry, heads of state and government, scholars, corporate representatives, youth groups, non-profit organizations, and civil society from across the globe, earning recognition of a responsible and impactful platform, mobilizing opinion-makers to address paramount issues related to sustainable development, resource efficiency, and climate change. ICEF inspires leaders to develop strategies that align with the goal of promoting a pro-planet mindset.

ICEF2026 aims to bring together experts from industry, startups, academia and policymakers to share the focussed action plan and strategies to implement circularity within their industry. The forum will provide actionable insights and strategies for businesses to meet their environmental compliances and improve their ESG and circularity score while identifying potential growth opportunities. Through expert panels, workshops, and networking opportunities, the forum will foster collaborations and promote policy dialogues that enable the Indian economy to thrive in a sustainable, circular framework.

Key Benefits

of ICEF2026

1

Provide businesses with the tools and knowledge to avoid the financial and reputational risks of failing to transition.

2

Showcase real-life examples of circular business models, technologies, and products that drive profitability and sustainability.

3

Facilitate dialogue between government and businesses to influence favorable circular economy policies.

4

Offer opportunities for Indian businesses to form cross-sector partnerships, both domestic and international.

5

Directly contribute to India's journey toward a more sustainable, greener and resilient economy.

6

Equip Indian industries with the expertise needed to implement circular economy strategies at scale.
